Subject: Application for the position of «Position Title» - Ref. «Job Reference» (workload: «100%»)

Dear «Recruiter Name»,

You. Your posting for the «Position Title» role, published on «source of the job ad», caught my full attention. «One or two sentences on a concrete element that genuinely characterizes the company - its culture, a project, a value - to customize per application». This direction matches my background in data engineering and business intelligence closely, and I want to put my skills to work for your team.

Me. I am a recently graduated Computer Science Engineer (ESPRIT, Data & Business Intelligence specialization, class of 2026). Across my two internships, I independently designed and deployed two full end-to-end decision-support platforms. At SIBTEL, Tunisia's sole interbank clearing operator (+50 million transactions/year, 28 member banks), I orchestrate a daily ELT pipeline with Apache Airflow, build a star-schema data warehouse protected by 40 automated quality tests, and deliver 6 Metabase dashboards along with Prometheus/Grafana monitoring. At Tunisie Telecom, I model a PostgreSQL data warehouse using the Kimball method and deliver 3 Power BI dashboards together with a machine learning model exposed through a Flask API. These two experiences taught me to turn business needs into concrete technical solutions, from design through to production.

Us. I am confident that my recent, hands-on experience in data engineering and BI, combined with my adaptability and genuine interest in «the company», would let me contribute effectively to your team. I am eligible for the Young Professionals Agreement between Switzerland and Tunisia, which allows a Swiss employer to hire me through a simplified process, without the standard work-permit procedure, for a placement of up to 18 months. I am available for a first conversation, in person or by video call, at your convenience.

Thank you for considering my application.
