PROFESSIONAL SUMMARY

Data and Business Intelligence Engineer with experience in data management, analytics, automation, and AI solutions within the banking and telecommunications sectors. Experienced in designing end-to-end data platforms, automating business processes, and developing dashboards that support operational and strategic decision-making. Specialized in **Data Engineering, Business Intelligence, Predictive Analytics, and Artificial Intelligence**. Actively seeking new opportunities and available for an immediate start.

PROFESSIONAL EXPERIENCE

SIBTEL - Société Interbancaire de Télécompensation

Dec. 2025 – Jun. 2026

Automation & Data Engineer

Tunis, Tunisia

- Designed and engineered a modern banking BI platform processing over **5 million monthly financial transactions** across 25+ member banking institutions.
- Designed and deployed **3 end-to-end n8n workflows** (API scraping, internal data cleaning, multi-source merging) to build a single version of truth of geographic referential covering 2,200+ bank agencies, replacing a fully manual process.
- Automated daily collection from external and internal sources: normalization, conflict/duplicate resolution, and geographic enrichment : delivered with zero manual intervention using **n8n**.
- Orchestrated an automated ELT pipeline processing over **5 millions of financial transactions per month**, with **40 automated quality tests**.
- Built a data warehouse and designed 6 visual dashboards in Metabase, allowing the company to track the performances of the national bank institutions.
- Implemented comprehensive, real-time monitoring and automated failure alerts across all system components, significantly reducing incident response times.

Tunisie Telecom

Jul. 2025 – Sept. 2025

Business Intelligence Engineer

Tunis, Tunisia

- Centralized 4 years of incident history from more than 50 different data sources into a unified reporting system.
- Automated data preparation and reporting workflows, reducing report generation time by **60%**.
- Developed a **machine learning model** to predict network incidents and support proactive intervention by operational teams.
- Delivered interactive dashboards used by more than 100 active users to monitor performance and support decision-making.

TECHNICAL SKILLS

Data Engineering	Apache Airflow, dbt, n8n, Talend Open Studio, SSIS
Data Warehousing	PostgreSQL, TimescaleDB, MySQL, Oracle, SQL Server, Star Schema, Kimball Methodology
Business Intelligence	Power BI, Metabase, Grafana, Prometheus, KPI Reporting, Data Quality Monitoring
Programming	Python (Pandas, NumPy, Scikit-learn), Advanced SQL, Flask, Angular, JavaScript
Analytics & AI	Predictive Analytics, Machine Learning, Artificial Intelligence, Business Analysis
DevOps & Tools	Docker Compose, Git, Microsoft Power Apps, SAP Fiori, Tesseract OCR

EDUCATION

Engineering Degree in Computer sciences - ERP & business intelligence specialization

2023 – 2026

ESPRIT - Private Higher School of Engineering and Technology, Tunis

Bachelor's Degree in Computer Science

2020 – 2023

ISAMM - University of Manouba, Tunis

KEY PROJECTS

Admissions BI & AI Solution

Jan. – May 2025 [GitHub](#)

Designed and implemented a complete business intelligence solution using Agile methodology, including a PostgreSQL star-schema data warehouse, Talend ETL pipelines integrating SQL and Excel data, predictive Python models for enrollment forecasting, and Power BI dashboards integrated into an Angular/Flask web application.

Airline Delay and Performance Analysis

Oct. – Dec. 2024 [GitHub](#)

Developed a complete decision-support solution including a SQL Server data warehouse designed using a star schema, SSIS ETL pipelines for data extraction and transformation, and Power BI dashboards providing key performance indicators such as delays, cancellations, punctuality rates, and airline rankings using DAX measures.

SmartPredict : AI Smartphone Recommendation System

Sep. – Dec. 2024 [GitHub](#)

Developed a machine-learning solution to help users select smartphones based on their needs and budget. Built predictive models to estimate smartphone prices, implemented a recommendation system, and created interactive Power BI dashboards for data visualization.
